

United States Patent N° PP 6,025

Peach tree (B-41871)

ABSTRACT

A new and distinct variety of peach tree which is large, vigorous, upright, spreading and hardy under California conditions; foliated with medium to large, lanceolate leaves having a crenate to finely serrate margin, and alternate globose glands; and is a regular and productive bearer of large, early ripening, uniform, semi-freestone, very slightly asymmetrical fruit globose in apical aspect and globose to slightly ovoid in lateral aspect, the fruit having straw-yellow ground color blushed with red, and yellow-amber flesh color.
